

# How Do I Uninstall A Program

## Steps to Uninstall a Program

Uninstalling a program can be helpful in various ways. It helps you to free up disk space and make your computer work faster better than before. At first, let us find **how to uninstall a program** from your Windows computer. You can do it in simple methods.

## Steps to Uninstalling a Program on Windows

### Using the Start menu:

- Start by selecting the Start menu on your Windows computer.
- Find the program that you want to uninstall.
- Once found, right-click on the program and then click Uninstall.

### Using the Settings menu:

- Go to the Settings menu.
- From the Settings window, navigate to Apps and features and then click on it.
- You can now select the program that you want to remove and then click Uninstall.

Hopefully, the above methods look easier to uninstall a program. You can uninstall a program quickly from the Control Panel.
